

OKOUME PLYWOOD

DESCRIPTION

Since decades okoumé plywood is one of the most wanted kinds of plywood on the Dutch market because of its durable properties. Okoumé grows mainly in Gabon in Central Africa and the cut down of trees is very strictly regulated by the Government. Because of its fine grain and low specific gravity this plywood is very suitable for processing and over painting. It's warm soft pink colour and its fine structure is widely appreciated.

The number of applications is enormous and it is suited for interior and exterior use. This product is very popular in yacht building.

The bonding quality of our plywood has been tested according to EN 314-2 and NEN 3278. Moreover our gaboön (okoume) is certified according to CE/Lloyd's regulations and KOMO. Our gaboön (okoume) plywood panels have also been tested on formal-dehyde emission and categorized as class E1 according to EN 717-2.

This plywood is very suitable for the Dutch climate and for bonding with veneer of HPL. Due to its above stated properties gaboön (okoume) is very suitable for sawing, screwing or milling.

OKOUME PLYWOOD

- Suitable for exterior use
- Quality: B/BB
- Bonding: WBP Class 3
- Approx. 500 kg/m³
- Sizes: 251 x 126 cm and 306 x 126 cm
- Please ask for available thicknesses.

Thicknesses:

3mm 10mm 15.5mm 25mm
4mm 11.5mm 17mm
6mm 12mm 18mm
8mm 14.5mm 20mm
9mm 15mm 22mm
